Bibliography of Electron and Photon Cross Sections

with Atoms and Molecules

Published in the 20th Century

— Xenon —*

Makoto Hayashi

(Gaseous Electronics Institute)

A bibliographies of original and review reports of experiments or theories of electron and photon cross sections and also electron swarm data are presented for atomic or molecular species with specified targets. These works covered 17 atoms and 51 molecules. The present bibliography is only for xenon (Xe). About 1180 papers were compiled. A comprehensive author index is included. The bibliography covers the period 1921 through 2000 for Xe. Finally, author's recommended Xe electron collision cross section set is given by number tables

Keywords : Xe atom, collision cross section, electron, elastic scattering, electronic excitation, ionization, photon, photoabsorption, photodissociation, photoexcitation, photoionization, electron swarm, drift velocity, diffusion coefficient, ionization coefficient, excitation and ionization energies, transition probability, lifetimes of excited states

* This work was carried out under the collaboration research program at National Institute for Fusion Science.

Introduction

History

This bibliography is the result of a continuing literature survey which was begun in around 1970 and originally encompassed only electron collision cross section and electron swarm data. The organization responsible for continuing this survey is Nagoya Institute of Technology, Nagoya. From 1994, the work continued to Gaseous Electronics Insititute, Nagoya. In 1997, the collection of photon cross section references was begun. The search for references in both cases was retrospective and included all papers reporting measurements, calculations or reviews of such cross sections and electron swarm data.

Scope

This bibliograpy contains references to original research papers which report experiments or theoretical calculations of cross sections for electron and photon collisions with xenon (Xe) atom. The review papers on this subject are also included. Some xenon cluster papers are included. Some conference reports, company or agency reports and PhD thesis are added. Xenon ion papers and positron collision papers are not included in principle.

Papers of the following quantities are included.

For electron collision cross section :

- 1) elastic scattering
- 2) electronic excitation
- 3) ionization
- 4) grand total scattering (sum of elastic and inelastic cross sections)
- 5) metastable xenon
- 6) electron swarm parameters (drift velocity, diffusion coefficient)
- 7) excitation and ionization coefficients

For photon collision cross section :

- 1) photoabsorption
- 2) photoexcitation and fluorescence
- 3) photodissociation
- 4) photoionization

For some related data :

- 1) excitation and ionization energies
- 2) transition probabilitiy
- 3) lifetime of excited states
- 4) the others

The energy range for electron cross section data is 0 - 10 keV mostly, but some more higher electron energy papers are included. The wavelength range for photon cross section data is from microwave to X-ray. Almost papers are concerned with infrared, visible and ultraviolet ray region.

The bibliography include the papers published in the 20th century, from 1901 to 2000. But oldest paper in this list is given by C. Ramsauer (1921). So for this xenon bibliography, published papers from 1921 to 1999 are compiled by alphabetical order of the first author's surname of the paper. And the references published in 2000 and plus some old papers found very recently after compilation are added as "Addenda of References for Xenon". Totally, about 1180 papers are compiled in the xenon bibliography.

Organization

This report consists of four parts : introduction, the bibliography and its addenda, author index and electron collision cross section set recommended by the author.

Bibliography

In this section the complete citation for all references are given. At first following classifications are shown :

E : Elastic collision
EX : electronic EXcitation
I : Ionization
ME : MEtastable xenon
S : electron Swarm
O : the Others (photon cross sections and the others)

All authors' initial and surname, journal name, volume, inclusive pages and year of publication are given as well as the title, and some additional informations in the square bracket []. E and T in the square bracket mean experiment and theory.

Bibliography for Xe are divided into three parts :

Part 1.	1980 - 1999	p. 1 - 42
Part 2.	1921 - 1979	p. 43 - 76
Part 3.	Addenda of References (1)	1997 - 1999 p. 77 - 79
	Addenda of References (2)	published in 2000, plus some old papers p. 80 - 100
	Addenda of References (3)	p. 101 - 102

Author Index

In this section all authors are listed alphabetically by surname. After each author's name is a list of page numbers indicating which references he or she authored or coauthored. (Author Index of Addenda of References for Xe (2) is not complete and some selected authors are listed. I am sorry about it.)

Electron Collision Cross Section Set for Xenon (Xe)

Electron collision cross section set of elastic, electronic excitation and ionization collision for xenon recommended by the author are given by the tables. Final conclusions are given and detailed discussions are not shown here. Elastic total and elastic momentum transfer cross sections are obtained from author's recommended elastic differential cross sections. These values of the set are not final, in other words, tentative values. The author would like to improve this cross section set slightly.

Acknowledgments

The author would like to say many thanks to :
Kazuo Takayanagi and Yukikazu Itikawa of ISAS, Tokyo and Sagamihara,
Hiroyuki Tawara of NIFS, Nagoya and Toki,
Yoshiharu Nakamura of Keio University, Kanagawa,
Yoshihiko Hatano of Tokyo Institute of Technology, Tokyo
for the continuous support and encouragement.

The author also would like to say many thanks to the librarians of the following organizations :

Nagoya Institute of Technology, Nagoya
Nagoya University, Nagoya (five libraries)
Institute of Plasma Physics, Nagoya University
National Institute for Fusion Science, Toki
Institute for Molecular Science, Okazaki

Finally, the author would like to say many thanks to Kayo Hirono for the longstanding support of the preparation of these bibliographies.

O E. Dershaw and M. Schein : Phys. Rev. 37, 1238-1245 (1931)

The absorption of the $K\alpha$ line of carbon in various gases and its dependence upon atomic number.

[E, $h\nu$, He - Xe, C, N, O, N_2 , O_2 , CO_2 , etc.]

O R. D. Deslattes : Phys. Rev. Lett. 20, 483-485 (1968)

Photoionization of the M shell of xenon. [E, $h\nu$, Xe; 670 - 800 eV]

E D. P. Dewangan and H. R. J. Walters : J. Phys. B11, 3983-4017 (1978) ·

I Electron loss from $H(2s)$, $H(1s)$, $He(1^1S)$, $He(2^3S)$, $Li(2^2S)$, H^- and He^- projectiles passing through the inert gases — the free-collision model.
[T, electron, He - Xe]

O D. Dill : Phys. Rev. A7, 1976-1987 (1973) ·

Resonances in photoelectron angular distributions. [T, $h\nu$, Xe, Hg]

EX A. J. Dixon and A. von Engel : Int. J. Elect. 25, 233-237 (1968) ·

Total inelastic cross sections for slow electrons in xenon.
[E, Xe; 8 - 12 eV]

I A. J. Dixon, I. E. McCarthy, C. J. Noble and E. Weigold : Phys. Rev. A17, 597-603 (1978)

Factorized distorted-wave approximation for the $(e, 2e)$ reaction on atoms : Noncoplanar symmetric. [T, Xe, Ne; 400 - 2500 eV]

O A. Dobay-Szegleth : Acta Phys. Acad. Sci. Hung. 21, 235- (1966)

Calculation of atomic form factors from the statistical electron-density distributions. [T, Xe, Kr, Ar]

EX G. G. Dolgov-Savelev and V. E. Panchenko : Opt. Spectrosc. 28, 575-578 (1970)

Electron-excitation cross sections for X-ray series of chlorine, argon, and xenon. [E, Xe, Cl, Ar; 3 - 16 keV]

I F. H. Dorman, J. D. Morrison and A. J. C. Nicholson : J. Chem. Phys. 31, 1335-1337 (1959)
Probability of multiple ionization by electron impact. [E, Xe, Ar]

I F. H. Dorman and J. D. Morrison : J. Chem. Phys. 34, 1407-1410 (1961)

Ionization potentials of multiply charged krypton, xenon, and mercury.
[E, Xe, Kr, Hg]

EX J. T. Dowell : Thesis, University of California 1-49 (1966)

Production of metastable atoms by electron impact. [., Xe, Kr, Ar]

- 0 M. J. Druyvesteyn and F. M. Penning : Rev. Mod. Phys. 12, 87-174 (1940) ·
The mechanism of electrical discharges in gases of low pressure.
[review, He - Xe, etc.]
- 0 T. L. Dutt : J. Phys. B2, 234-246 (1966)
Investigations of the afterglows of pulsed rare gas discharges in the
frequency range 200 - 1500 MHz. [E, Xe, Kr, Ar, He]
- S J. Dutton : J. Phys. Chem. Ref. Data 4, 577-856 (1975) ○
A survey of electron swarm data. [compilation, Xe, etc.]
- 0 D. L. Ederer : Phys. Rev. Lett. 13, 760-762 (1964)
Photoionization of the 4d electrons in xenon. [E, hν, Xe]
- 0 D. L. Ederer : Phys. Rev. A4, 2263-2270 (1971)
Cross-section profiles of resonances in the photoionization continuum
of krypton and xenon (600 - 400 Å). [E, hν, Xe, Kr]
- 0 D. L. Ederer and M. Manalis : J. Opt. Soc. Am. 65, 634-637 (1975)
Photoabsorption of the 4d electrons in xenon. [E, hν, Xe]
- I F. Egger and T. D. Mark : Z. Naturforsch. A33, 1111-1113 (1978) ·
Cross section ratios for the electron impact production of singly and
multiply ionized rare gas ions. [E, He - Xe]
- I Th. M. El-Sherbini, M. J. van der Wiel and F. J. de Heer : Physica 48, 157-164
(1970) ·
Multiple ionization of Kr and Xe by 2 - 14 keV electrons. [E, Xe, Kr]
- I Th. M. El-Sherbini and M. J. van der Wiel : Physica 62, 119-138 (1972) ·
Oscillator strengths for multiple ionization in the outer and first
inner shells of Kr and Xe. [E, Xe, Kr]
- EX S. B. Elston, S. A. Lawton and F. M. J. Pichanick : 8th ICPEAC, Belgrade 480-481
(1973) ·
High resolution studies of electron excitation processes in xenon.
[E, Xe; uv intensity from 3P_1 and 1P_1 states, 8 - 13 ev]
- I P. Englander-Golden and D. Rapp : Report LMSC-6-74-64-12, Lockheed Missiles
and Space Company, I-50 (1964)
Total cross sections for ionization of atoms and molecules by electron
impact.
[E, He - Xe, etc.; These q_i values are different from D. Rapp (1965)]
- S W. N. English and G. C. Hanna : Can. J. Phys. 31, 768-797 (1953) ·
Grid ionization chamber measurements of electron drift velocities in gas
mixtures. [E, Xe, (Ne - Xe) + (CO₂, CH₄), etc.]
- S A. P. Ershov and A. A. Kuzovnikov : J. Physique 40, C7, Grenoble 521-522 (1979)
a Electron energy distribution function in Xe plasma in the presence of
Coulomb collisions. [T, Xe; as a function of ionization degree]

- O J. J. Ewing and C. A. Brau : Phys. Rev. A12, 129132 (1975) ·
 Emission spectrum of XeI in electron-beam-excited Xe/I₂ mixtures.
 [E, hν, Xe + I₂]
- E H. Faxen and J. Holtsmark : Z. Phys. 45, 307-324 (1927)
 Beitrag zur Theorie des Durchganges langsamer Elektronen durch gase.
 [T, Ar - Xe, H, Cs]
- EX P. V. Feltsan and I. P. Zapesochinyi : Ukr. Fiz. Zh. 13, 205-210 (1968)
 Excitation of inert gases at electron-atom collisions. V. Xenon.
 [, Xe]
- E M. Fink and J. Kessler : Z. Phys. 196, 1-15 (1966)
 Absolute Wirkungsquerschnitte fur Elektronenstreuung um kleine
 Winkel. Experimente zum Gultigkeitsbereich der ersten Bornschen
 Naherung. [E, Ar - Xe, 37 - 100 keV]
- E M. Fink and A. C. Yates : Atomic Data 1, 385-456 (1970a)
 Theoretical electron scattering amplitudes and spin polarizations.
 Selected targets, electron energies 100 to 1500 eV.
 [T, He - Xe; DCS]
- E M. Fink and A. C. Yates : Technical Rep. No. 88, Univ. of Texas, AD-711, 664, 1-152
 (1970b)
 Tables of scattering amplitudes and spin polarization of 25, 50, 75, 150,
 175, 200, 300, 400, 600, 800 eV electrons scattered elastically from H,
 He, C, Ne, Ar, Kr, Rb, Xe, Cs, Au, Hg, Pb, and Bi-I. [T, Xe, etc.]
- O C. D. Finney and A. G. Harrison : Int. J. Mass Spectrom. Ion. Phys. 9, 221-233 (1972)
 A third-derivative method for determining electron-impact onset
 potentials. [E, Xe, CH₄, C₃H₈, CH₃OH, C₆H₆, etc.]
- I S. N. Foner and B. H. Nall : Phys. Rev. 122, 512-524 (1961)
 Structure in the ionization near threshold of rare gases by electron
 impact. [E, Ar - Xe]

Electron Collision Cross Section Set for Xenon (Xe)

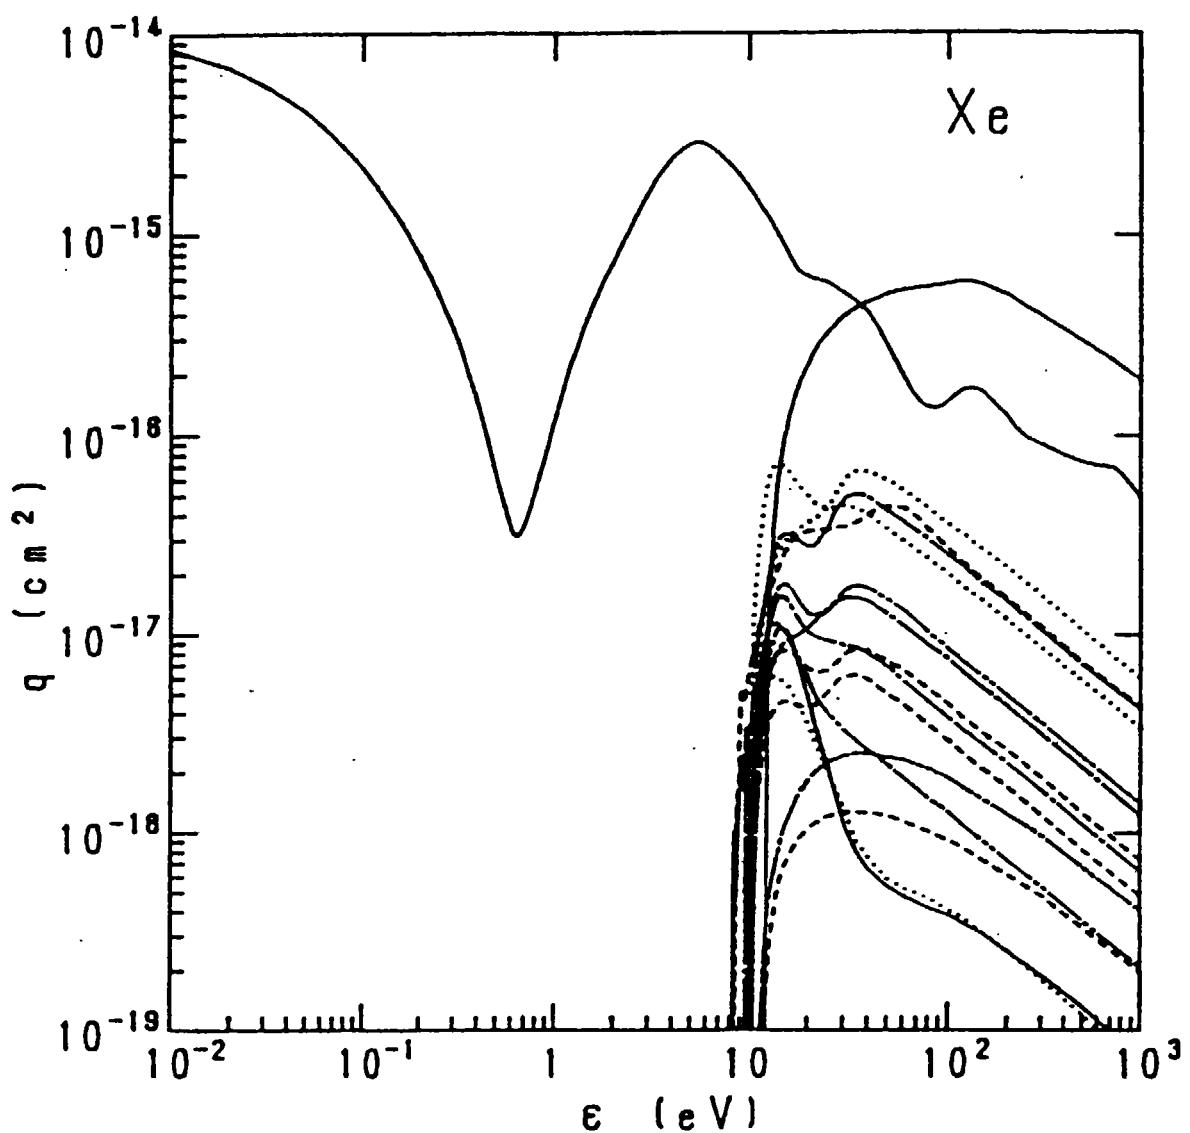

Figure 1. Electron collision cross section set for Xe.

Elastic momentum transfer cross section q_m . Electronic excitation cross sections $q_{e1} - q_{e14}$ divided into fourteen energy levels as shown in the next table. Total ionization cross section q_i . Detailed cross section values are shown in the following tables.

Important Energy Levels for Xenon

	Pachen notation	designation	energy (eV)	resolved feature
0	P ₀	5p ⁶	0	
1	1s ₅	6s [3/2] ₂	8.315	q _{e1}
	1s ₄	6s [3/2] ₁	8.437	q _{e2}
	1s ₃	6s' [1/2] ₀	9.447	q _{e3}
	1s ₂	6s' [1/2] ₁	9.570	q _{e4}
5	2p ₁₀	6p [1/2] ₁	9.580	
	2p ₉	6p [5/2] ₂	9.686	q _{e5}
	2p ₈	6p [5/2] ₃	9.721	
	2p ₇	6p [3/2] ₁	9.789	q _{e6}
	2p ₆	6p [3/2] ₂	9.821	
10	3d ₆	5d [1/2] ₀	9.891	
	3d ₅	5d [1/2] ₁	9.917	
	2p ₅	6p [1/2] ₀	9.934	q _{e7}
	3d _{4'}	5d [7/2] ₄	9.943	
	3d ₃	5d [3/2] ₂	9.959	
15	3d ₄	5d [7/2] ₃	10.039	q _{e8}
	3d _{''}	5d [5/2] ₂	10.158	q _{e9}
	3d _{1'}	5d [5/2] ₃	10.220	q _{e10}
	3d ₂	5d [3/2] ₁	10.401	q _{e11}
	2s ₅	7s [3/2] ₂	10.562	
20	2s ₄	7s [3/2] ₁	10.593	
	3p ₁₀	7p [1/2] ₁	10.902	
	3p ₉	7p [5/2] ₂	10.954	
	2p ₄	6p' [3/2] ₁	10.958	
	3p ₈	7p [5/2] ₃	10.969	
25	4d ₆	6d [1/2] ₀	10.972	
	4d ₅	6d [1/2] ₁	10.979	
	3p ₆	7p [3/2] ₂	10.996	
	4d ₃	6d [3/2] ₂	10.999	q _{e12}
	3p ₇	7p [3/2] ₁	11.008	
30	3p ₅	7p [1/2] ₀	11.015	
	4d _{4'}	6d [7/2] ₄	11.024	
	4d ₄	6d [7/2] ₃	11.038	
	2p ₃	6p' [3/2] ₂	11.055	
	4d _{1'}	6d [5/2] ₂	11.065	
35	2p ₂	6p [1/2] ₁	11.069	
	4d _{1'}	6d [5/2] ₃	11.101	
	2p ₁	6p' [1/2] ₀	11.141	
	4d ₂	6d [3/2] ₁	11.163	
39	3s ₅	8s [3/2] ₂	11.259	q _{e13}
74	4s ₅	9s [3/2] ₂	11.580	q _{e14}
	² P ₀ _{3/2} (Xe ⁺)		12.130	ionization potential
